

M2705 SERIES

SINGLE-OUTPUTS, 1.5KW AC TO DC POWER SUPPLY

The M2705 is a baseplate-mount, conduction-cooled, 3-phase AC/DC power supply designed for rugged airborne applications requiring a lagging power factor presented to the 115Vac, 3-phase bus. The unit can tolerate the normal transients of MIL-STD-704F as well as ride through the power interrupt (50mS) required in MIL-STD-704.

This unit is sealed to protect against fluids, with a breather valve for condensation exhaust. M2705 is based upon field proven M2703, with a front end that provides a lagging power factor and additional hold circuitry.
