### Detailed Information

#### 1. M4465 Input Voltage Operation.

The M4465 steady state operation voltage is 18V to 48 V and will continuously work up to 50V Input line.

When Configurable to support MIL-STD 704/1275 transients or surges, the unit will shut down when input voltage rises above 60V or under 16V for more than 2Sec and immediate shut down under 12V or above 100V Input. Power supply automatically recover when it's Input goes back to normal steady state line.

Note: 1275E configuration is optional, contact Factory.

#### 1.1 Low Line Turn-on and Turn-off Limits

To avoid Turn-on and Turn-off cycling glitch the unit have about 2V Hysteresis. The Turn-on threshold is under 20V and turn- off under 18V.

Those limits can be adjusted, contact Factory for more information.

#### 2. Outputs Voltage Regulation

The M4465 contains accurate internal sense lines to keep output voltage at less than 4% regulation for all Line/ Load and temperature range (see Table 2).

Output	12V/25A	5V/30A	3.3V/20A	3.3VAux/5A	12VAux/1A	(-)12VAux/1A
Voltage Range	11.85 – 12.15	4.9 – 5.1	3.28 – 3.42	3.2 – 3.4	11.7 – 12.2	(-)11.85 – (-)12.15

Table 2: Outputs voltage regulation. VIN 18V – 48V, Temperature -55 °C – 85 °C

#### 2.1. Sense Lines

*Sense Lines* are provided for VS1, VS2 and VS3 output to compensate line voltage drop. *Sense Lines* proper connection is shown in Figure 3.

Each VSx output has its own *Sense Lines*, additional common *Sense RTN Line* is provided for all VSx Outputs (VITA 62 Standard).

Contact Factory for Sense configuration different than the VITA 62 standard

### 3.1 Mil-STD 1275E Surges

The Unit can support up to 500W during 12V surge. Operating the unit at higher power may results in a poor output transient response during the surge.

Table 4: Max current per output during 12V surge

Note 1: Max total current of 12V rail (12Vvs1, 12Vaux & (-) 12Vaux) should not exceed 22A in order to stay in spec regulation

Figure 4a/b shows 12VSI output during 100V and 12V surges.
