

M802 SERIES

DC/DC POWER SUPPLY

PRODUCT HIGHLIGHTS

- **MINIATURE**
- **HIGH DENSITY**
- **EIGHT OUTPUTS**
- **DC/DC CONVERTER**
- **UP TO 145W**

M802 SERIES DC/DC POWER SUPPLY

Applications

Military (airborne, shipboard, mobile), Ruggedized, Telecom, Industrial Power Supply

Special Features

- Miniature size
- High efficiency
- Wide input range
- Input / Output isolation
- Fixed switching frequency (250 kHz)
- External synchronization capability
- TTL logic enable
- EMI filters included
- Non-latching protections:
Overload/short-circuit protection
Input over/under-voltage lockout
Over temperature protection

Environmental Conditions

Meets MIL-STD-810G

Temperature:

Operating: -55°C to $+85^{\circ}\text{C}$ (baseplate)

Storage: -55°C to $+125^{\circ}\text{C}$

Reliability

150,000 hours, calculated IAW

MIL-HDBK-217F at $+85^{\circ}\text{C}$ baseplate,

Ground Fix conditions.

Electrical Specifications

DC INPUT

Voltage range: 18 to 70 V_{DC}

Abnormal transients: Protected

from

transients IAW MIL-STD-1275A (100 V / 50 ms) and MIL-STD-704A (80 V /

0.1 s) Efficiency: Up to 80%

EMC: Designed to meet MIL-STD-461F*
CE101, CE102, CS101, CS114, CS115,
CS116, RE101, RE102, RS101, RS103

Isolation:

Input to Output:

200 V_{DC} Input to Case:

200 V_{DC}

DC OUTPUTS (groups floating)

Output voltage regulation: Less than $\pm 1\%$
(no load to full load, -55°C to $+85^{\circ}\text{C}$)

Ripple and Noise: 50 mV_{p-p}, typ. (max.
1%)

Current limiting:

Continuous protection for unlimited

time Over voltage protection:

Passive transorbs on outputs.

Over temperature protection:

Shutdown if baseplate temperature exceeds
 $+105^{\circ}\text{C} \pm 5^{\circ}\text{C}$; Automatic recovery upon
baseplate cooldown to below $+95^{\circ}\text{C} \pm$
 5°C . Isolation:

Output to Case: 100 V_{DC}

*EMC compliance achieved when tested with 5 μH LISNs, shielded harness and static resistive load.

Functions and Signals

INHIBIT

The ***INHIBIT*** signal is used to turn the power supply ON and OFF.

TTL “1” or OPEN – Power supply is ON (For normal operation, leave this pin unconnected.) TTL “0” or SHORT to ***SIGNAL RTN*** – Power supply is OFF.

SYNC

The ***SYNC*** signal is used to allow the power supply's switching frequency to sync with the system clock. The external clock's frequency can be $250 \text{ kHz} \pm 10 \text{ kHz}$.

When this pin is left open (unconnected) the power supply will synchronize to its internal clock, set at $250 \text{ kHz} \pm 10 \text{ kHz}$

SIGNAL RTN

The ***SIGNAL RTN*** is used as a return path for the ***SYNC*** and ***INHIBIT*** signals. This pin is referenced to ***VIN RTN***.

Outputs Isolation (Ground RTN groups)

- All outputs are isolated from the input.
- Outputs are separated into the following four galvanically isolated groups:
 - Group A: Outputs #1, #2 and #3
 - Group B: Outputs #4 and #5
 - Group C: Output #6
 - Group D: Outputs #7 and #8
